

Iteration	Story	Tasks	Estimated Hours
Planning	Meeting Log		
		Create initial log	1
		Update as Necessary	10
Planning	Weekly		
		Create and share weekly reports	10
Planning	Research of Languages		
		Research HTML and Javascript	2
		Implement Javascript open XML and get values	5
		Style Javascript output of XML for readability	2
Planning	Documentation		
		Create SRS template and share to members	2
		Assign sections to necessary members	1
		Fill out assigned section	12
		Create Vision doc template and share with team	2
		Update Vision doc	2
Planning	Contact Customer		
		Schedule Meeting	1
		Notify and introduce team	0.5
		Reserve Room	0.5
		Setup information transfer from team to client	0.5
Planning	Setup Tools		
		Establish set of tools to be used	2
		Setup Github	1
		Setup Google Drive folder	0.5
		Setup and evaluate Koding	2
		Setup scrumDo	2
		Change to Rally	4
Dates: 9/13 -	Totals for this Iteration		63
Design	Influence Meeting		
		Meeting Arrangements	1
		Notify Team	0.5
		Create Reservation	0.5
		Material Organization	2
		Create Lists of Questions	4
		Document What was learned	1
Design	Use Case Document		
		Define Use Cases	2
		Create Use Case diagrams	3
Design	Interface		
		Create Interface Templates	4
Design	Update Documentation		
		Update SRS to represent changes	6

		Software Development Plan	10
Design	Construct Test Docs		
		Create example RTM	6
		Research xml and schemas	4
		Create test xml's so coding can start	10
Dates: 10/21 -	Totals for this Iteration		54
Creation	Display XML to User		
		Output XML nodeNames into table of contents	2
		Output XML nodeValues into preview pane	2
		Display tabs for access to other documents in	1
		Change displayed output to XSLT result	4
Creation	Make XML editable		
		Put preview into textarea	1
		Implement save method for each XML element	25
		Implementation of isNewest tags	1
		Changes for XSLT	4
Creation	Create XML Schema's		
		Implement Schema for SRS, Use case, and Test	6
		Implement Project schema	1
		Review with client	4
Creation	Create XML's that follow schema		
		Revise all XML's to assure they meet schema	4
Creation	Create XSL		
		Create XSL stylesheet for all XML's so they can be	8
		Edit XSL to include edit option	2
Creation	Make references between documents		
		Edit schema to allow linking between XML's within a	2
		Edit XSL to show links to User	4
Creation	Make RTM		
		Make XSL to show RTM	2
Creation	Downloadable HTML output		
		Make button to download HTML for uneditable	1
Dates: 11/28 -	Totals for this Iteration		74
Testing	Determine Completeness of System		
		Ensure all requirements of project are met	12
		Make necessary changes	12
Testing	Use Case Documentation		
		Ensure all Use Cases are met	6
		Make Use Case document of what occurred using our	4
Testing	Test Case Documentation		
		Make Test Case document of what occurred using	4

Dates: 3/15 -	Totals for this Iteration		38

Notes

Chose to use Github for code sharing, Google Drive for documentation,
Allows for nice version control and sharing between developers
Great sharing, multiple editors, privacy, and rights control
Cloud platform which allows for development from anywhere. We
This was a nice scrum tool that allowed for Google incorporation and

Typically government applications are very slow, Liked our tab idea

This was a huge challenge in Javascript and took an unnecessary

Once XSLT was completed its output is used not only for the GUI but

Originally this was written to completely re-write the XML. This was

Since XSLT easily broke Para's into divs and used direct XML values

Document command was not supported by javascript, this was fixed
