

To do for end of year completion

Ari's List

- ~~Fix role bug~~
- Make "test result" and "approved by" save to the XML.
- Table and other shit into popup
- Project name in create doesn't actually change the project name

Jeremiah's List

- ~~projectName is only changed in projectXML~~
 - ~~can this change project name is all the project xml files?~~
 - ~~when document preview on a document, title still says lifecycle does instead of project name, but this is in the default templates.~~
- ~~broke document Preview when fixing RTM~~
 - ~~this works sometimes, ill click again and get a script error, but then click again and it works?~~
 - ~~script error says - system has already been scheduled to shutdown?~~
 - ~~only modified projectIO.js~~
- Section 1.0 bug
- When adding image, it needs to get copied into the images folder
 - This is not going to be easy, need a solution to access files outside of the working directory. For now images should be copied into the "Images" folder within the project.
- Size of paras
- ~~Change section title doesn't work right~~
- ~~Changing references after a section has been renumbered~~
- ~~Add reference in Use Case style error — looks like XSL change between SRS and UC~~
- ~~Added paras not getting index attribute~~
- ~~Check create templates, adding section not working on created project~~
- Double check user guide
- Put together code history
 - If Time
 - **5/16** ~~Test case references — should show test results~~
 - Reference right click menu - go to this reference
 - ~~RTM back button on top — tried, but couldnt get it on top~~
 - Table and other shit into popup

Pete's List

- **5/14** Finish references throughout XML documents
- **5/14** Finish updating SRS XML
- **5/14** Commit any backups you have that aren't on Github
 - — these are already there!
- **5/14** Update meeting log to best of ability, add this to Github

- **5/14** Check out adding a test case...What specifically goes wrong
 - ~~testsave.xml doesn't show test cases, if we're saving anything, we're not seeing it~~
 - references dont display when clicked anymore?
 - comment text box doesnt display unless theres para for comment
 - when right-clicking comment in edit mode, try to add para, and get stack overflow error, line 127?
 - can't actually 'add' a new test result, with edit on, dropdowns dont display new information options from project xml?
- **5/14** ~~If time allows. Try to create a single XSL that provides the interface we currently have, but works for all documents~~
 - ~~—did this using the NotionalSRSXSL!~~
 - ~~—should print empty test result & approvedBy?~~
- **5/15** Fill test plan xml, and do the test cases!
- **5/16** fixed RTM
 - creates additional project file in xml folder to access only files
 - ~~maybe broke document preview?~~
- ~~Re-Test failed test cases.~~
- ~~Remove stuff in Saves folder and other created xml files from testing.~~
- notes
 - using jscript offers inherit file security
 - xml files are lightweight, good for networks, great for storage.
