To do for end of year completion

Ari's List
- Fix role bug
- Make "test result" and "approved by" save to the XML.
  - Their method is currently in "JS/contextmenu.js"
  - Look in edit.js and save.js for methods to reuse and do this
  - When "test result" gets changed it should save a date/time object to date element
  - Look into changing test case comments, and saving these
- Table and other shit into popup
- Project name in create doesn't actually change the project name

Jeremiah's List
- ~~Section 1.0 bug~~
- When adding image, it needs to get copied into the images folder
- Size of paras
- Change section title doesn't work right
- Changing references after a section has been renumbered
- Add reference in Use Case style error - looks like XSL change between SRS and UC
- Added paras not getting index attribute
- Check create templates, adding section not working on created project
- Double check user guide
- Put together code history
  - If Time
  - Test case references - should show test results
  - Reference right click menu - go to this reference
  - RTM back button on top
  - Table and other shit into popup

Kevin's List
- Verify and export, SRS, Use case, Test Case
- ^_____^ -____-

Pete's List
- 5/14 Finish references throughout documents
- 5/14 Finish updating SRS
- 5/14 Commit any backups you have that aren't on Github - these are already there!
- Update meeting log to best of ability, add this to Github
- Check out adding a test case...What specifically goes wrong
- If time allows. Try to create a single XSL that provides the interface we currently have, but works for all documents
